

# 2/13/2026: Meeting Overview

Meeting held at: 12:00 pm

Attendees: Sridhar Alagar, Adarsh Gella, Kade A O'bar, Dennis Keithly, Ben Stidham, Christopher Chaiban, Jose Rodas

Meeting overview written by: Dennis Keithly

The purpose of the meeting was to meet with Dr. Allagar and to go over the project proposal that was written prior to this meeting. While presenting, a few suggestions were made:

- Adding a subscription service that adds in paid apis for things such as weather
  - A free weather api may be found at (<https://api.weather.gov/>)
- A general location service could be implemented that warns users if they are approaching an unsafe road.
- A pretrained model can be used and tuned to suit our needs.

Additionally, a few requirements need to be added to the project:

- Ideally, separate GitHub repositories for the front and backend should be made, so long as there are clear protocols for the two systems to interact with each other.
- An AI tool should be decided upon for general development. While the team is not locked to this AI, a general agent should be decided upon
- The project timeline should be made to sync up with weekly meetings for more accurately trackable phases.
  - AI tools can be used to improve this process.
  - A weekly or biweekly sprint should be incorporated.

These requirements should be fulfilled, and once a more concrete project plan is created, individual assignments for the team can be created.

The next planned meeting is on 2/20/2026
